

Pump & Motor Catalog

Aluminum Bushing Series

Catalog HY09-1000/US

The Parker Hannifin Gear Pump Division Assures:

- Consistent quality
- Technical innovation
- Premier customer service

Worldwide Sales and Service

Parker operates sales and service centers in major industrial areas worldwide. Call 1-800-C-PARKER for more information, or for a synopsis of the Gear Pump Division, contact a Parker representative.

The Gear Pump Division's ability to engineer specialty products for unique applications has kept us at the forefront of technology, and ensured our position as the industry leader. Our success has come from providing a quality product with excellent sales and service support.

We manufacture hydraulic components for a wide range of industries including:

- Construction
- Refuse/dump truck
- Material handling
- Forestry
- Agriculture
- Industrial

WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Offer of Sale

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by the provisions stated in the "Offer of Sale".

All units shown in this catalog are of aluminum construction to provide superior performance, while affording excellent horsepower-to-weight ratio.

P16 SERIES

- Flows to 37 GPM per section
- Tandem & triple section units available
- Pressures to 3000 PSI
- Speeds to 3600 RPM
- Also available as motor
- Priority flow available
- Dry valve option
- Clutch pump available

20 SERIES

- Flows to 98 GPM per section
- Tandem & triple section units available
- Pressures to 2500 PSI
- Speeds to 2500 RPM
- Pressure & flow sensing valves available
- Dry valve option
- Piggy back option available
- Also available as motor
- Cast iron versions available

25 SERIES

- Flows to 208 GPM per section
- Tandem section units available
- Pressures to 3000 PSI
- Speeds to 2500 PSI
- Piggy back option available
- Dry Valve option
- Also available as motor
- Cast irons versions available

HP 7 SERIES

- Flows to 116 GPM per section
- Tandem section units available
- Pressures to 4000 PSI
- Speeds to 2500 RPM

HP 8 SERIES

- Flows to 177 GPM per section
- Tandem section units available
- Pressures to 4000 PSI
- Speeds to 2500 RPM

**General Information
for P16 Series**

- Available in various configurations
 - P16 — Single Section
 - TP16 — Tandem, 2 & 3 Place
 - PVP16 — Priority Valve
 - CP16 — Clutch Pump 'V' Belt and Serpentine
- Cast iron pumping sections for durability
- Aluminum flanges and covers for optimum power to weight ratio.
- Journal bearings for long life and good over-hung load capability
- Buna-N Seals are standard for petroleum and glycol based fluids. "Viton®E" seals are optional.
- Pressure balanced plates for greater efficiency.

How to Order P16 Series:

Select the desired symbol (in the correct position) to construct a model code.

Assembly Example:

Options

Code	Description
V	Viton®

Model

Code	Description
P	Pump (single)
TP	Tandem Pump
PVP	Priority Valve Pump
CP	Clutch Pump

Section Size

Code	Cu. In./ Rev.	CC's/ Rev.
45	.878	14.388
65	1.270	20.812
85	1.663	27.252
100	1.964	32.184
115	2.241	36.723
150	2.934	48.080
180	3.511	57.535
200	3.902	63.942

Rotation

Code	Direction
A	C'C' Wise
C	C' Wise

Shaft

Code	Description
1	5/8" 9-Tooth Spline

TP16	200	.0169	3.904	.0639	63.942	.0140	2000	138	1900

Note: For best inlet conditions, place largest displacement section in the rear position and use both inlet ports.
All data based on SAE 10W oil at 150°F.
Available with Viton® Seals.

CAUTION: "Inlet vacuum" should not exceed 5" Hg at normal operating speed and temperature.
Operation of pumps in excess of 5" Hg requires factory approval.

Dimensional Data

PD Factors

The maximum size and number of sections of a tandem pump for a given application is limited to the torque capability of the input drive shaft and the spline coupling between the sections. To determine this capability, a "PD Factor" is used:

Maximum allowable PD for the 7/8" drive shaft is 53.
 Maximum allowable PD for a coupling is also 53.

When: P = PSI (The relief valve setting of each individual section).

D = Displacement (In U.S. gallons per revolution of each individual section).

Example: Assume a two-place pump TP16-150 — 150 with front and rear sections on pressure at the same time at 2000 PSI:

- A. Drive Shaft:
 $PD = (2000) (.0127) + (2000) (.0127) = 50.8$ vs. 53. Capability is OK
- B. Coupling between front and center sections:
 $PD = (2000) (.0127) = 25.4$ vs. 53. Capability is OK.

Flange Dimensions

FLANGE TYPE	E		F	
D	6.35	(.250)	41.15	(1.62)
E	4.75	(.187)	69.85	(2.75)

P16	180	.0152	3.511	.0575	57.535	.0126	2200	152	2100
P16	200	.0169	3.904	.0639	63.942	.0140	2000	138	1900

Note: Three-place pumps assembled from maximum displacement size sections should be checked for operating inlet conditions.
If "PD Factor" is not exceeded, place the largest displacement section in the rear position and use all inlet ports.
All data based on SAE 10W oil at 150°F.
Available with Viton® Seals.

CAUTION: "Inlet vacuum" should not exceed 5" Hg at normal operating speed and temperature.
Operation of pumps in excess of 5" Hg requires factory approval.

Dimensional Data

To determine overall pump length
 Add together the dimensions that apply to the pump you
 are considering.

- A = _____ Shaft Extension
- B = _____ Flange Length
- C = _____ Front Gear Plate Length
- D = $\frac{79.2 \text{ mm}}{3.12 \text{ in.}}$ Connector Plate Length
- E = _____ Center Gear Plate Length
- F = $\frac{79.2 \text{ mm}}{3.12 \text{ in.}}$ Connector Plate Length
- G = _____ Rear Gear Plate Length
- H = $\frac{52.3 \text{ mm}}{2.06 \text{ in.}}$ Cover Plate Length
- J = $\frac{19.0 \text{ mm}}{.75 \text{ in.}}$ Stud Extension
- _____ Total = Overall Length

PUMP SIZE	C, E & G
-45	21.84 (.86)
-65	27.18 (1.07)
-85	32.77 (1.29)
-100	36.83 (1.45)
-115	40.89 (1.61)
-150	50.29 (1.98)
-180	58.42 (2.30)
-200	63.75 (2.51)

Flange Dimensions

FLANGE TYPE	B	K
D	41.1 (1.62)	6.3 (.250)
E	69.8 (2.75)	4.7 (.187)
F	44.4 (1.75)	—
J	69.8 (2.75)	6.3 (.250)
N	39.3 (1.55)	9.5 (.375)
S	84.0 (3.31)	5.0 (.200)

**Inch equivalents for millimeter
 dimensions are shown in (**).**

PD Factors

The maximum size and number of sections of a tandem pump for a given application is limited to the torque capability of the input drive shaft and the spline coupling between the sections. To determine this capability, a "PD Factor" is used:

Maximum allowable PD for the 7/8" drive shaft is 53.
 Maximum allowable PD for a coupling is also 53.

When: P = PSI (The relief valve setting of each individual section).
 D = Displacement (In U.S. gallons per revolution of each individual section).

Example: Assume a three-place pump TP16-150-150-100 with front and center sections on pressure at the same time at 2000 PSI, and with the rear section on pressure at 1500 PSI, but not at the same time as the front and center sections:

- A. Drive Shaft:
 - (1) PD = (2000) (.0127) + (2000) (.0127) = 50.8 vs. 53. Capability is OK
 - (2) PD = (1500) (.0085) = 12.7 vs. 53. Capability is OK.
- B. Coupling between front and center sections:
 - PD = (2000) (.0127) = 25.4 vs. 53. Capability is OK.
- C. Coupling between center and rear sections:
 - PD = (1500) (.0085) = 12.7 vs. 53. Capability is OK.

Note: For purpose of illustration, assume all three pump sections to be on pressure at the same time.
 A. Drive Shaft:
 PD = (2000) (.0127) + (2000) (.0127) + (1500) (.0085) = 63.5 vs. 53. Capability is not OK

Because the PD Factor for the shaft is 53, operating all three sections at the same time (to relief valve pressure) would exceed the torque capability of the drive shaft.

- B. Coupling between front and center sections:
 - PD = (2000) (.0127) + (1500) (.0085) = 35.1 vs. 53. Capability is OK

Remember also that the PD factor for the coupling is 53. If the center and rear sections are on pressure at the same time, the coupling between the front and center sections must transmit the torque for the center and rear sections.

**Specifications

All data based on SAE 10W oil at 150°F.
 Available with Viton® Seals.

CAUTION: "Inlet vacuum" should not exceed 5" Hg at normal operating speed and temperature.
 Operation of pumps in excess of 5" Hg requires factory approval.

Operating Notes

- Detailed installation and operating instructions are included in each clutch-pump package. Consult those instructions before installation and/or operation.
- Clutch Data:
 - Clutch No. 1 - 12 V.D.C.; 4.26 amps; 2.82 ohms @ 20°C; 75 Lb. Ft.
 - Clutch No. 2 - 12 V.D.C.; 4.36 amps; 2.75 ohms @ 20°C; 125 Lb. Ft.
 - Clutch No. 3 - 12 V.D.C.; 4.58 amps; 2.62 ohms @ 20°C; 200 Lb. Ft.
 - Clutch No. 4 - 12 V.D.C.; 4.36 amps; 2.75 ohms @ 20°C; 125 Lb. Ft.
- Burnishing: If full rated torque (or system pressure) is required at start-up, burnishing or cycling of the clutch will be necessary. Burnishing of the clutch can be accomplished by running the engine between 2500 and 3000 RPM and cycling the clutch on and off against the system relief valve. The relief valve should be set at 75% of the maximum pressure rating as shown in the chart above. The clutch should be cycled 50 times at a rate of 10 to 15 cycles per minute.
- Voltage: The torque capability of the clutch varies with the actual voltage measured at the clutch. Do not operate at less than 11.5 volts.
- For maximum clutch life: #1 #2 & #4 should be mounted to run in 'C' rotation. #3 should be mounted to run in 'A' rotation, (looking at the front of the clutch).

Electric Clutch Switch: Order Kit No. 33520

General Information for 20 Series

■ Standard Series - Available in various configurations:

20 — Single section

TP20 — Tandem, 2 & 3 Place

R20 — Reversible, 2 piece construction

PB20 — Piggy-back design - allowing for additional pumps

■ Construction:

Aluminum - For excellent power to weight ratio
or

Cast iron - for extra durability.*

■ Journal bearings for long life
and good, over-hung load capability

■ Buna-N Seals are standard for petroleum and
glycol based fluids, "VitonE®" seals are optional.

■ Pressure balanced plates for greater efficiency

■ 20 Series with Integral Logic Valves / Tandem Pumps:

NST20 — Tandem pump with flow
sensitive unloading valve

NSD20 — Tandem pump with flow-sensitive unloading
valve and power-beyond port for the unloading valve

NSH20 — Tandem pump with
pressure-sensitive unloading valve

NDS20 — Tandem pump with
pressure-summation unloading valve

NSHD20 — Tandem pump with flow
and pressure-sensing unloading valve

PSH20 — Tandem pump with air-
operated unloading valve

Utilizing:

- Integral valving eliminates the need
for external valves and related plumbing

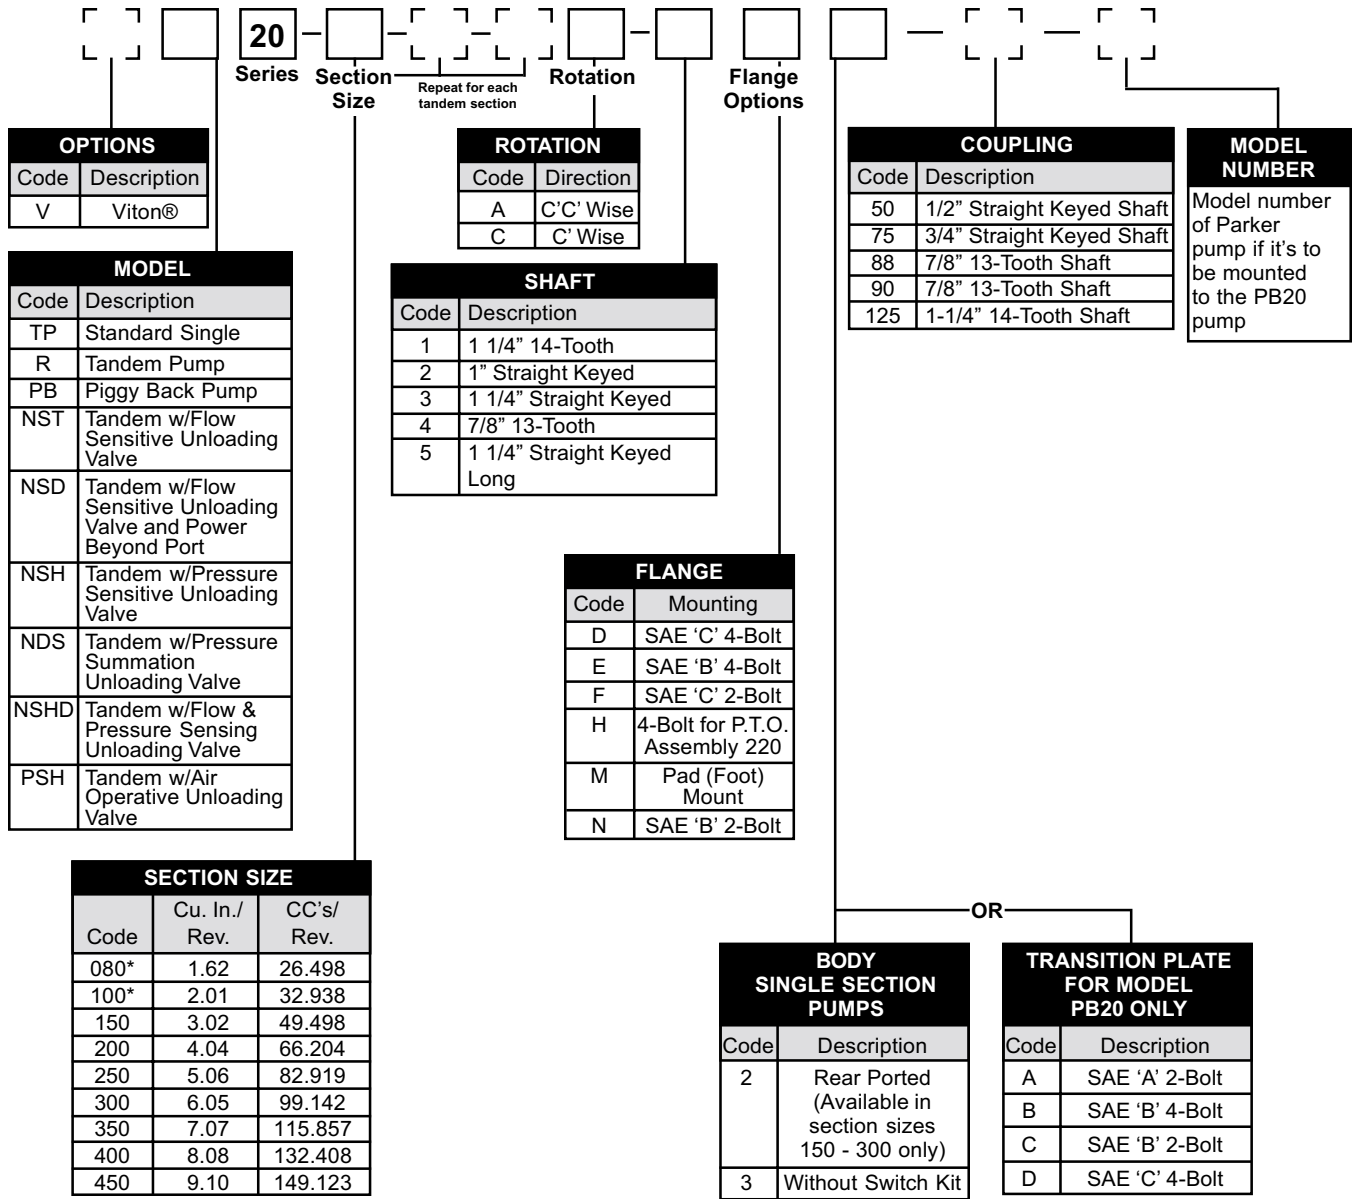

* Cast iron is not available on all models.
Consult factory for availability.

How to Order 20 Series:

Select the desired symbol (in the correct position) to construct a model code.

Assembly Example:

*Available as rear sections in tandem pumps only

Note: Add prefix 'V' to pump model number (V20) when ordering pumps with Viton® Seals.
 Cast Iron is available on some models.
 Consult factory for availability

**Specifications
for 20 Series**

Description Gear Pump
Flow Range To 98 GPM (370.9 LTR.)
Displacements To 9.10 C.I.R. (149.12 CC's/REV.)
Maximum Pressure to 2500 PSI (172 BAR)
Maximum Speed to 2500 RPM
Rotation A or C
Bearing Journal
Construction Aluminum or Cast Iron*

Performance Data

Notes: (1) 2100 PSI maximum due to torque limitations of No. 4 shaft. (2) 1800 PSI maximum due to torque limitations of No. 4 shaft
All data based on SAE 10W oil at 150°F. Available with Viton® Seals.

*Some models and sizes are available for pressure up to 3500 PSI. Cast-iron not available on all models. Consult factory for availability.

CAUTION: "Inlet vacuum" should not exceed 5" Hg at normal operating speed and temperature.
Operation of pumps in excess of 5" Hg requires factory approval.

PD Factors

Drive Shaft	Factors
#1 - 1/4 Spline	187
#3 - 1/4 Keyed	187
#5 - 1/4 Keyed	187
Coupling	110

The maximum size and number of sections of a tandem pump for a given application is limited to the torque capability of the input drive shaft and the spline coupling between the sections. To determine this capability, a "PD Factor" is used:

- P = PSI (The relief setting of each individual section).
- D = Displacement (In U.S. gallon per revolution of each section).

Example: Assume a double pump TP20450-450A-3D with front and rear sections on pressure at the same time at 2500 PSI.

- A. Drive Shaft:
 $PD = (2500) (.0394) + (2500) (.0394) = 197$ vs. 187.
 Capability of drive shaft is not OK.
- B. Coupling between front and rear sections:
 $PD = (2500) (.0394) = 98.5$ vs. 110.
 Capability of coupling is OK.

NOTE: If the rear section of this tandem pump was limited to 2000 PSI, the combination of both sections would be acceptable:

$PD = (2500) (.0394) + (2000) (.0394) = 177.3$ vs. 187.
 Capability of drive shaft is OK.

Inch equivalents for millimeter dimensions are shown in (**).

**Specifications
for TP20 Series**

Description Gear Pump (Three-place)
Flow Range To 98 GPM Per Section (370.9 LTR.)
Displacements To 9.10 C.I.R. Per Section (149.12 CC's/REV.)
Maximum Pressure to 2500 PSI (172 BAR)
Maximum Speed to 2500 RPM
Rotation A or C
Bearing Journal
Construction Aluminum or Cast Iron*

PD Factors

Drive Shaft	Factors
#1 - 1 1/4 Spline	187
#3 - 1 1/4 Keyed	187
#5 - 1 1/4 Keyed	187
Coupling	110

The maximum size and number of sections of a tandem pump for a given application is limited to the torque capability of the input drive shaft and the spline coupling between the sections. To determine this capability, a "PD Factor" is used:

P = PSI (The relief setting of each individual section).
 D = Displacement (In U.S. gallon per revolution of each section).

Example: Assume a double pump TP20450-450A-3D with front and rear sections on pressure at the same time at 2500 PSI and with the rear section on pressure at 1500 PSI but not at the same time as the front and center sections.

A. Drive Shaft:
 $PD = (2500) (.0394) + (2000) (.0394) = 216.7$
 Capability is **not** OK.

The "PD" factor for a no. 3 shaft is 187; therefore, to operate all three sections at once (to relieve valve pressure) would exceed the torque capability of the drive shaft.

B. Coupling between front and center sections:
 $PD = (2000) (.0394) = 137.9$ vs. 110.
 Capability is **not** OK.

The "PD" factor for the coupling is 110. If the center and rear sections are on pressure at the same time. The coupling between the front and center sections must transmit the torque for the center and rear sections.

Inch equivalents for millimeter dimensions are shown in (**).

**Specifications

All front section pumps are available with Viton® Seals.
*Cast-iron not available on all models. Consult factory for availability.

CAUTION: "Inlet vacuum" should not exceed 5" Hg at normal operating speed and temperature. Operation of pumps in excess of 5" Hg requires factory approval.

All data based on SAE 10W oil at 150° F.

Dimensional Data

Inch equivalents for millimeter dimensions are shown in (**).

PB20 Series Front Section — One Place with 2-Bolt Transition Plate

PB20 Series Front Section Two Place

**Specifications
 for NST20 Series**

Description Flow-Sensitive Unloading Gear Pumps
 Combined Flow Range To 98 GPM Per Section (370.9 LTR.)
 Displacements... To 9.10 C.I.R Each Section (149.12 CC's/REV.)
 Maximum Pressure to 2500 PSI (172 BAR)
 Maximum Speed to 2500 RPM
 Rotation A or C
 Bearings Journal
 Construction Aluminum

Tandem Pump with Flow Sensitive Unloading Valve

At low pump speeds the flow from both pump sections is to the circuit. As speed increases, the rear pump section begins to bypass internally to the inlet of the front pump section. After approximately a 400 RPM spread, the rear pump is completely bypassing and only the flow of the front pump is to the circuit. The bypass set point is field adjustable within approximately ±200 RPM.

Performance Data Per Section

**Tandem Pump with Flow-Sensitive-Unloading Valve
 and Power Beyond Port For the Unloaded Pump**

This system consists of a tandem pump and unloading valve with the unloading valve being sensitive to pump speed. The system has primary and secondary discharge ports such that both pumping sections are diverted to the primary port at low pump speeds. At an intermediate pump speed the rear pump section is metered from the primary port and a portion is diverted to the secondary port. At a predetermined higher speed, the rear pumping section is completely diverted to the secondary port while all of the front pumping section flow is maintained at the primary port.

Tandem Pump with Pressure-Sensitive Unloading Valve

The NSH pump system uses an unloading valve to divert the flow from one section of a tandem pump. The system is designed to limit the hydraulic horsepower, and thus limit the horsepower taken from the prime mover. Flow is supplied from both pumping sections at low, working pressure and from only the front pumping section at high pressure. As the system pressure increases to a predetermined value, a pilot relief valve opens, causing the main spool to divert the rear pumping section to the common inlet port, while the front pumping section continues to supply fluid to the system.

When the system pressure decreases to the predetermined value for which it was set, the relief valve closes, causing the main spool to divert the unloaded flow of the rear pumping section back into the system. The rear section can be manually unloaded at any time, regardless of system pressure, by venting the manual unload pilot port.

**Tandem Pump with Pressure-Summation
 Unloading Valve**

The NDS pump system is essentially the same as the NSH system, except the unloading pressure signal is the summation of the internal pressure, plus an external pressure from another pumping system. The NDS system is useful in limiting the horsepower withdrawn from the prime mover in a multiple pump circuit system.

If System B is operating at minimum pressure, then the NDS circuit (System A) can operate at a high pressure-high flow before unloading the rear pumping section.

If System B is operating at high pressure, then the NDS circuit (System A) would unload the rear pumping section at a lower pressure to avoid overloading the engine. This relationship can be seen in the chart which illustrates the unloading characteristics for the NDS system, when used in conjunction with another hydraulic pump (system B).

Construction Aluminum

**Tandem Pump with Flow-Sensing and
 Pressure-Sensing Unloading Valve**

This system consists of a tandem pump and an unloading valve. The unloading valve is actuated by either a flow signal (pump speed) or a pressure signal, thus combining the features of the NST and NSH systems into a single system.

**Specifications
 for PSH20 Series**

Description Air-Actuated Unloading Pump
 Combined Flow Range ... To 98 GPM Per Selection (370.9 LTR.)
 Displacements... To 9.10 C.I.R. Each Section (149.12 CC's/REV.)
 Maximum Pressure to 2500 PSI (172 BAR)
 Maximum Speed to 2500 RPM
 Rotation A or C
 Bearings Journal
 Construction Aluminum

Tandem Pump With Air-Actuated Unloading Valve

This tandem pump with air-actuated unloading valve is commonly used to select either the combined flow rate of both pump sections. or the flow rate of only one pump section.

Performance Data Per Section

Pump Model	Section Size	Displacement/Revolution (Theoretical)					Maximum Pressure		Maximum Speed

All data based on SAE 10W oil at 150°F. Available with Viton® Seals.

CAUTION: "Inlet vacuum" should not exceed 5" Hg at normal operating speed and temperature. Operation of pumps in excess of 5" Hg requires factory approval.

General Information for 25 Series

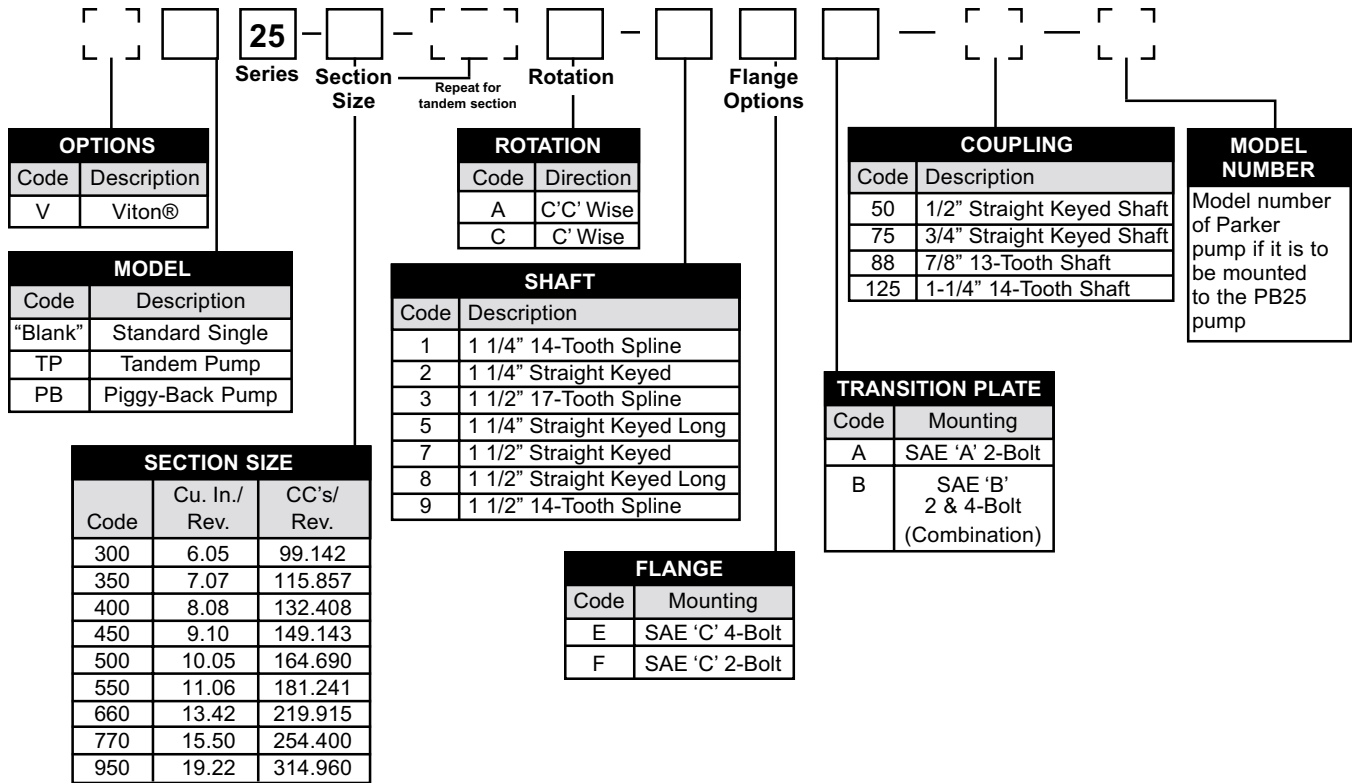

- Available in various configurations:
 - 25 – Single Section
 - TP25 – Tandem. 2 & 3 Place
 - PB25 – Piggy-back design – allowing for additional pumps.
 - Constructions:
 - Aluminum – For excellent power to weight ratio
 - or
 - Cast iron – for extra durability*
 - Journal bearings for long life and good over-hung load capability
 - Buna-N Seals are standard for petroleum and glycol based fluids. “Viton®E” seals are optional.
 - Pressure balanced plates for greater efficiency.
- * Cast iron is not available on all models. Consult factory for availability.

How to Order 25 Series:

Select the desired symbol (in the correct position) to construct a model code.

Assembly Example:

**Specifications
for 25 Series**

Description Gear Pumps
Flow Range To 208 GPM (787.3 LTR.)
Displacements To 19.22 C.I.R. (314.96 CC's/REV.)
Maximum Pressure to 3000 PSI (207 BAR)
Maximum Speed to 2500 RPM
Rotation A or C
Bearings Journal
Construction Aluminum
Cast Iron Available—Consult Factory

General Information for HP Series

■ Available in various configurations:

- HP7 – Single Section
- THP7 – Tandem, 2-Place

- HP8 – Single Section
- THP8 – Tandem, 2-Place

■ Construction:

- Aluminum body and flange for excellent power to weight ratio
- Journal bearings for long life and good over-hung load capability
- Buna-N Seals are standards for petroleum and glycol based fluids. “Viton®E” seals are optional.
- Pressure balanced plates for greater efficiency
- Aluminum construction for the best power to weight ratio
- Journal bearings for long life and good over-hung load capability
- Buna-N Seals are standard for petroleum and glycol based fluids. “Viton®E” seals are optional.
- Pressure-balanced plates for greater efficiency

■ HP7 - THP7 Features:

- Displacements to 10.74 C.I.R.
- Pressures to 4000 PSI

■ HP8 - THP8 Features:

- Displacements to 116.38 C.I.R.
- Pressures to 4000 PSI

How to Order HP Series:

Select the desired symbol (in the correct position) to construct a model code.

Assembly Example:

**Specifications
 for HP7-THP7 Series**

Description..... Gear Pumps
 Flow Range To 116 GPM Per Section (440.01 LTR.)
 Displacements To 10.74 C.I.R. Per Section (176.00 CC's/REV.)
 Maximum Pressure to 4000 PSI (276 BAR)
 Maximum Speed to 2500 RPM
 Rotation A or C
 Bearings..... Journal
 Construction Aluminum

Performance Data Per Section

**Specifications
 for HP8-THP8 Series**

Description Gear Pumps
 Flow Range To 177 GPM Per Section (670.0 LTR.)
 Displacements To 16.38 C.I.R. Per Section (268.42 CC's/REV.)
 Maximum Pressure to 4000 PSI (276 BAR)
 Maximum Speed to 2500 RPM
 Rotation A or C
 Bearings Journal
 Construction Aluminum

Performance Data Per Section

HP8	850	.0709	16.38	.2683	268.421	.059	3000	207	2500

All data based on SAE 10W oil at 150°F. Available with Viton® seals.
 Note: Pressurized suction required: Speeds to 2000 RPM require 0 PSI minimum.
 *Speeds above 2000 RPM require the suction to be pressurized to 5 PSI minimum.

CAUTION: "Inlet vacuum" should not exceed 5" Hg at normal operating speed and temperature. Operation of pumps in excess of 5" Hg requires factory approval.

Dimensional Data

Inch equivalents for millimeter dimensions are shown in (**).

SAE 4-Bolt NPT Connectors are available. See Accessory Section

General Information for Gear Motor Series

■ Available is the following:

UM 16 – Uni- (single) directional motor not designed for series operation

M20 – Bi-directional, good for series operation

TM20 – Bi-directional, good for series operation

SPM20 – Bi-directional, good for series operation

M25 – Bi-directional, good for series operation

TM25 – Bi-directional, good for series operation

SPM25 – Bi-directional, good for series operation

■ Journal bearings for long life and good over-hung load capability

■ Buna-N-Seals are standard for petroleum and glycol based fluids “Viton®E” seals are optional.

■ Pressure balanced plates for greater efficiency.

How to Order Gear Motor Series:

Select the desired symbol (in the correct position) to construct a model code.

Assembly Example:

The diagram illustrates the construction of a model code for a gear motor. It shows a sequence of boxes representing different components: Options, Series (16), Section Size, Repeat tandem section, Rotation, Flange Options, and another Section Size. Below these are detailed tables for each component.

OPTIONS	
Code	Description
V	Viton®

MODEL	
Code	Description
UM	Uni-directional Motor
M	Motor
TM	Tandem Motor
SPM	Series/Parrallel Motor

SERIES	
Code	Description
16	
20	
25	

ROTATION	
Code	Direction
A	C' C' Wise
C	C' Wise

Note: M20, M25 TM25 and SPM25 leave blank for Bi-Rotational

UM16 SECTION SIZE		
Code	Cu. In./ Rev.	CC's/ Rev.
45	.878	14.39
65	1.270	20.81
85	1.663	27.25
100	1.964	32.18
115	2.241	36.72
150	2.934	48.08
180	3.511	57.54
200	3.904	63.98

M20 / SPM20 SECTION SIZE		
Code	Cu. In./ Rev.	CC's/ Rev.
150	3.02	49.85
200	4.04	66.20
250	5.06	82.92
300	6.05	99.14
350	7.07	115.86
400	8.08	132.41
450	9.10	149.12

M25 / TM25 / SPM25 SECTION SIZE		
Code	Cu. In./ Rev.	CC's/ Rev.
550	11.06	181.94
660	13.42	219.91
770	15.50	254.00

UM16 SHAFT	
Code	Description
2	7/8" 13-Tooth Spline
5	7/8" Straight Keyed
6	3/4" Straight Keyed

M20 / SPM20 SHAFT	
Code	Description
1	1 1/4" 14-Tooth Spline
2	1" Straight Keyed
3	1 1/4" Straight Keyed
4	7/8" 13-Tooth Spline
5	1 1/4" Straight Keyed Long

M25 SHAFT	
Code	Description
1	1 1/4" 14-Tooth Spline
2	1 1/4" Straight Keyed
5	1 1/4" Straight Keyed Long

TM25 & SPM25 SHAFT	
Code	Description
1	1 1/4" 14-Tooth Spline
6	1 1/2" 17-Tooth Spline
7	1 1/2" Straight Keyed
8	1 1/2" Straight Keyed Long
9	1 1/2" 14-Tooth Spline

COVER PLATE (UM16 ONLY)			
Code	Port	Inlet	Outlet

Code	Mounting
E	SAE 'C' 4-Bolt
F	SAE 'C' 2-Bolt

Specifications for UM16 Series

UM16 Features Include:

- Uni- (single) Rotation Motor Rotation must be specified.
- Motor does not have a bearing drain and is not suitable for series operation.
- Journal bearings for long life and good over-hung load capability
- Buna-N Seals are standards for petroleum and glycol based fluids “Viton®” seals are optional.
- Pressure balanced plates for greater efficiency.

Description Gear Motors
 Flow Range To 42 GPM (158.9 LTR)
 Displacements To 3.90 C.I.R. (63.98 CC's/REV.)
 Maximum Pressure to 3000 PSI (207 BAR)
 Maximum Speed to 3600 RPM
 Rotation Uni-(Single) Direction
 Bearings Journal
 Construction Aluminum Flange & Cover
 with Cast Iron Gear Section

Tandem Motor With Valving To Provide Two-Speed Operation On Constant Input Flow

Parker two-speed motors consist of two hydraulic motor units and pilot operated valving. From this unique unit either high speed or high torque can be obtained, thereby improving the efficiency of winch drives, track drives, and hydrostatic transmissions. Main features of these units are: no external pilot pressure source is necessary, shift to different speed is extremely smooth; and the motor will not hesitate during shift. Displacement of the two motors need not be equal. It utilizes one inlet and one outlet and is fully reversible.

The two motor sections are connected through valving to the common inlet/outlet ports. For low-speed, high-torque output, the pilot port is vented to the tank. For higher-speed, lower torque, the pilot port is blocked, causing the internal valves to shift to the closed position, routing the total flow through the rear motor section. The front motor section receives lubrication oil through the valve section, and requires very little horsepower in this position, since it is only recirculating the fluid.

Inch equivalents for millimeter dimensions are shown in (**).

Description	Two-Speed Gear Motors
Flow Range	To 134 GPM (507.2 LTR) per Section
Displacements	To 15.50 CIR. (240 CC's/REV.) per Section
Maximum Pressure to	2500 PSI (172 BAR)
Maximum Speed to	2000 RPM
Rotation	Bi-Directional
Bearings	Journal
Construction	Aluminum

Tandem Motor With Valving To Provide Two-Speed Operation On Constant Input Flow

Parker two-speed motors consist of two hydraulic motor units and pilot-operated valving. From this unique unit either high-speed or high torque can be obtained, thereby improving the efficiency of winch drives, track drives, and hydrostatic transmissions. Main features of these units are: no external pilot pressure source is necessary, shifting to different speed is extremely smooth; the motor will not hesitate during shift. Displacement of the two motors need not be equal. It utilizes one inlet and one outlet, and is fully reversible.

The two, motor sections are connected through valving to the common inlet/outlet ports. For low-speed, high-torque output, the pilot port is vented to tank. For higher speed, lower torque, the pilot port is blocked, causing the internal valves to shift to the closed position, routing the total flow through the rear motor section. The front motor section receives lubrication oil through the valve section, and requires very little horsepower in this position, since it is only recirculating the fluid.

Performance Data Per Section

Inch equivalents for millimeter dimensions are shown in (**).

General Information for Dry Valve Series

- Available in various configurations:
 - DVP16 — 3 piece construction, cast iron pumping section, aluminum flange, aluminum cover
 - DV20 — 2 piece construction, all aluminum or all cast iron*
 - DV25 — 2 piece construction, all aluminum or all cast iron*
 - Valve is of separate bar stock construction for ease of maintenance.
 - Multi-section pumps are available.
 - Journal bearings for long life
 - Buna-N Seals are standard for petroleum and glycol based fluids. "Viton®E" seals are optional.
 - Pressure balanced plates for greater efficiency.
- * Cast iron not available on all models. Consult factory for availability.

How to Order Dry Valve Series:

Select the desired symbol (in the correct position) to construct a model code.

Assembly Example:

**Specifications
 for ES Flow Control**

Body Material: Cast Grey Iron

Valve Weight: 3.5 lbs. (1.31 Kg.)

Working Pressure: 2500 PSI (172 Bar)

Standard Orifice Sizes Available: 5/16 7.9 (.312)
 3/8 9.5 (.375)
 7/16 11.1 (.438)
 1/2 12.7 (.500)
 9/16 14.2 (.562)

As unregulated flow enters the “ES” valve from the pump, the pressure drop across the orifice creates a force that works against the restraining spring. If the flow is enough to generate a force that exceeds the spring force, the excess flow* is allowed to escape through the “excess flow” port.

* The excess flow cannot be used for a secondary circuit. It must be returned to the tank.

Standard Flow Valve Available	
Model	Orifice Size
ER-312	7.92 (.312)
ER-375	9.52 (.375)
ER-437	11.10 (.437)
ER-500	12.7 (.500)
ER-562	14.27 (.562)

Inch equivalents for millimeter dimensions are shown in (**).

Please Note:
 To order with pump, order as part of pum model number.
 See HOW TO ORDER section of this catalog.

Inch equivalents for millimeter dimensions are shown in (**).

**General Information
 for Wet Pump**

- New patented standby mode eliminates the need for dry valves or clutches
- Low standby pressure
- Cast iron construction
- 10 tooth gears for low noise
- Large diameter journal bearings for long life
- New pressure balance design
- Controls: Manual, Solenoid, Electronic and Overspeed
- Especially suited for front loader refuse trucks

■ Built-In Benefits:

- **New Patented Standby Mode Eliminates Dry Valves or Clutches:**
 The new "stand-by" mode is provided by an air actuated integral system.
- **No External Bleed Valves or Associated Hardware Needed:**
 There is no wasted pump flow in the pumping mode.
- **Very Low Standby Pressure:**
 The power requirements are lower than most dry valve systems (50 PSI or less).
- **Rugged Cast Iron Body:**
 Exceptional resistance to pressure spikes and contamination for long life.
- **10 Tooth Gear Design:**
 Provides high efficiency and contamination resistance for demanding applications.
- **Pressures to 3500 PSI:**
 Flexibility for almost any application.
- **Large Diameter Journal:**
 Large shafts and journal bearings allow high pressure use with a long life.
- **New Pressure Balanced Design:**
 One piece pressure balance design simplifies assembly and service.
- **Light Weight:**
 This creative new design is more compact, has fewer parts, and is lighter than comparable pumps.
- **Eliminates Need for Large Flow Capacity By-Pass Line to Reservoir**

Operation

The new "stand-by" mode of the Model FPW257 allows you to direct-mount the pump without clutches, dry valves or PTOs. This by-pass feature has low power requirements in the standby mode and eliminates the need for external bleed valves.

Stand-By Mode

In the standby mode, the integral air shifted valve allows the pump flow to be by-passed to the inlet side of the pump. This is done with very little pressure loss, therefore the power demand is very low. At the same time, some of the flow is routed through the journal bearing area to lubricate and cool the bearings.

Because all flow is internal to the pump, there is no need to provide an external bleed valve. The only requirement is for a bearing drain line direct to the reservoir.

Pumping Mode

In the pumping mode, the valve blocks the internal coring so that full pump flow is available for work.

Stand-By Mode

Pumping Mode

**Specifications
for FPW257 Series**

Description Wet Valve Pump
Flow Range To 94.4 GPM (357.3 LTR)
Displacements To 8.750 C.I.R. (143 cc's/Rev.)
Maximum Pressure to 3500 PSI
Maximum Speed to 2500 RPM
Rotation A or C
Bearings Journal
Construction Cast Iron

Flow Regulator Valve (FR) –Option

The by-pass flow regulator allows the excess flow above the regulated flow to be by-passed for return to pump suction. Typically, they are used for limiting flow to refuse packer circuits. The valve is designed to be bolted directly to the discharge port of the FPW257 Model pump with a 1-1/4" SAE 4-bolt connector pattern.

Note: The excess flow can not be used for secondary circuits.

Performance Data

Flow Characteristic Curves

Standard Orifice Sizes Available:
 FR-31 — 7.92 (.312)
 FR-38 — 9.52 (.375)
 FR-44 — 11.13 (.438)
 FR-50 — 12.7 (.500)

See chart to determine correct size.

Please Note:
 To order with pump, order as part of pump model number.

See HOW TO ORDER section of this catalog.

Accessories –With Manual Shift

The Manual Shift Package provides a convenient method of controlling the "WET" pump from the pumping mode to the standby mode. The pump control system utilizes a 70-140 PSI air source generally available from the vehicle. Along with the Manual Shift Valve, the "Control Panel" contains a RED light to indicate when the pump is in the "WET" (Standby) mode.

Note: It is strongly recommended that all installations include a "Pressure Protection Valve" to ensure the vehicle air pressure is maintained in case of a line or fitting failure in the pump control system.

COMPLETE Manual Shift Package contains:

- Manual Air Shift Package w/flow regulator
 - Manual Air Shift Valve Package
 - Pressure switch
 - Protection valve
 - Manual Valve Package
 - Indicator Package
 - Hose Package
 - Drain Line Kit
 - Pneumatic Tubing Kit
- (Contains enough fittings and tubing for normal installation.)

Accessories –With Solenoid Shift

The Solenoid Shift Package provides a convenient method of electrically controlling the "WET" pump from the pumping mode to the standby mode. The pump control system utilizes a 70-140 PSI air source generally available from the vehicle. Along with the Solenoid Control switch, the "Control Panel" contains a RED light to indicate when the pump is in the "WET" (Standby) mode.

Note: It is strongly recommended that all installations include a "Pressure Protection Valve" to ensure the vehicle air pressure is maintained in case of a line or fitting failure in the pump control system.

COMPLETE Solenoid Air Shift Package contains:

- Solenoid Air Shift Package w/flow regulator
 - Solenoid Air Shift Package
 - Pressure switch
 - Protection valve
 - Solenoid Shift Package
 - Indicator Package
 - Hose Package
 - Drain Line Kit
 - Pneumatic Tubing Kit
- (Contains enough fittings and tubing for normal installation.)

Accessories		
Item No.	Item Description	Part No.
A	COMPLETE Manual Air Shift Package (consists of items 3,5,6,7 & 8)	29884
B	COMPLETE Solenoid Air Shift Package (consists of items 4, 5, 6, 7 & 8)	29885
1	Manual Air Shift Package (Consisting of accessory items 3, 5 & 6)	17514
2	Solenoid Air Shift Package (Consisting of accessory items 4, 6, & 6)	17515
3	Manual Valve Package	17508
4	Solenoid Valve Package	17509
5	Indicator Package	17506
6	Hose Package	17507
7	Pressure Switch (Air)	16117
8	Protection Valve (Air)	16393

Air System Installation and Warning Notes:

- All air system additions or alterations must comply with Federal Standard FVMSS-121.
- Pressure protection valve P/N 16393 is provided to protect existing air brake systems. It maintains reserve air system hold back pressure of 65-75 PSI.
- Ports on the pressure protection valve are 1/4-18 NPTF (Female). Be sure to note proper air flow direction arrow on valve body for installation.
- Install pressure protection valve, P/N 16393 by making a tee connection to the main air line. **DO NOT** use the valve as a through port that supplies air to the original air system.
- The inlet port to the pressure protection valve P/N 16393 must be connected using approved brass or steel fittings. Nylon, other type plastics, non-approved (Ferrous and non-ferrous) fittings shall not be used.
- The secondary air system is the preferred connection point for auxiliary devices. The primary system should only be used if secondary system connections are impractical.
- Connect to supply lines at/or between service tanks and in-cab control valves only.
- DO NOT** connect lines between air tanks and relay valves.
- DO NOT** connect to lines between foot valve and relay valves or front axle delivery to brakes (delivery system).
- DO NOT** connect to spring brake lines or lines to emergency system spring brake valve.
- DO NOT** connect to supply (wet) tank or connecting lines.
- DO NOT** tap between check valve at supply line to air reservoir and reservoir port.

The items described in this document and other documents or descriptions provided by Parker Hannifin Corporation, its subsidiaries and its authorized distributors are hereby offered for sale at prices to be established by Parker Hannifin Corporation, its subsidiaries and its authorized distributors. This offer and its acceptance by any customer ("Buyer") shall be governed by all of the following Terms and Conditions. Buyer's order for any such items, when communicated to Parker Hannifin Corporation, its subsidiary or an authorized distributor ("Seller") verbally or in writing, shall constitute acceptance of this offer.

1. Terms and Conditions of Sale: All descriptions, quotations, proposals, offers, acknowledgments, acceptances and sales of Seller's products are subject to and shall be governed exclusively by the terms and conditions stated herein. Buyer's acceptance of any offer to sell is limited to these terms and conditions. Any terms or conditions in addition to, or inconsistent with those stated herein, proposed by Buyer in any acceptance of an offer by Seller, are hereby objected to. No such additional, different or inconsistent terms and conditions shall become part of the contract between Buyer and Seller unless expressly accepted in writing by Seller. Seller's acceptance of any offer to purchase by Buyer is expressly conditional upon Buyer's assent to all the terms and conditions stated herein, including any terms in addition to, or inconsistent with those contained in Buyer's offer. Acceptance of Seller's products shall in all events constitute such assent.

2. Payment: Payment shall be made by Buyer net 30 days from the date of delivery of the items purchased hereunder. Amounts not timely paid shall bear interest at the maximum rate permitted by law for each month or portion thereof that the Buyer is late in making payment. Any claims by Buyer for omissions or shortages in a shipment shall be waived unless Seller receives notice thereof within 30 days after Buyer's receipt of the shipment.

3. Delivery: Unless otherwise provided on the face hereof, delivery shall be made F.O.B. Seller's plant. Regardless of the method of delivery, however, risk of loss shall pass to Buyer upon Seller's delivery to a carrier. Any delivery dates shown are approximate only and Seller shall have no liability for any delays in delivery.

4. Warranty: Seller warrants that the items sold hereunder shall be free from defects in material or workmanship for a period of 18 months from date of shipment from Parker Hannifin Corporation. **THIS WARRANTY COMPRISES THE SOLE AND ENTIRE WARRANTY PERTAINING TO ITEMS PROVIDED HEREUNDER. SELLER MAKES NO OTHER WARRANTY, GUARANTEE, OR REPRESENTATION OF ANY KIND WHATSOEVER. ALL OTHER WARRANTIES, INCLUDING BUT NOT LIMITED TO, MERCHANTABILITY AND FITNESS FOR PURPOSE, WHETHER EXPRESS, IMPLIED, OR ARISING BY OPERATION OF LAW, TRADE USAGE, OR COURSE OF DEALING ARE HEREBY DISCLAIMED. NOTWITHSTANDING THE FOREGOING, THERE ARE NO WARRANTIES WHATSOEVER ON ITEMS BUILT OR ACQUIRED WHOLLY OR PARTIALLY, TO BUYER'S DESIGNS OR SPECIFICATIONS.**

5. Limitation Of Remedy: SELLER'S LIABILITY ARISING FROM OR IN ANY WAY CONNECTED WITH THE ITEMS SOLD OR THIS CONTRACT SHALL BE LIMITED EXCLUSIVELY TO REPAIR OR REPLACEMENT OF THE ITEMS SOLD OR REFUND OF THE PURCHASE PRICE PAID BY BUYER, AT SELLER'S SOLE OPTION. IN NO EVENT SHALL SELLER BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES OF ANY KIND OR NATURE WHATSOEVER, INCLUDING BUT NOT LIMITED TO LOST PROFITS ARISING FROM OR IN ANY WAY CONNECTED WITH THIS AGREEMENT OR ITEMS SOLD HEREUNDER, WHETHER ALLEGED TO ARISE FROM BREACH OF CONTRACT, EXPRESS OR IMPLIED WARRANTY, OR IN TORT, INCLUDING WITHOUT LIMITATION, NEGLIGENCE, FAILURE TO WARN OR STRICT LIABILITY.

6. Changes, Reschedules and Cancellations: Buyer may request to modify the designs or specifications for the items sold hereunder as well as the quantities and delivery dates thereof, or may request to cancel all or part of this order, however, no such requested modification or cancellation shall become part of the contract between Buyer and Seller unless accepted by Seller in a written amendment to this Agreement. Acceptance of any such requested modification or cancellation shall be at Seller's discretion, and shall be upon such terms and conditions as Seller may require.

7. Special Tooling: A tooling charge may be imposed for any special tooling, including without limitation, dies, fixtures, molds and patterns, acquired to manufacture items sold pursuant to this contract. Such special tooling shall be and remain Seller's property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in apparatus belonging to Seller which is utilized in the notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller shall have the right to alter, discard or otherwise dispose of any special tooling or other property in its sole discretion at any time.

8. Buyer's Property: Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer's property, may be considered obsolete and may be destroyed by Seller after two (2) consecutive years have elapsed without Buyer placing an order for the items which are manufactured using such property, Seller shall not be responsible for any loss or damage to such property while it is in Seller's possession or control.

9. Taxes: Unless otherwise indicated on the face hereof, all prices and charges are exclusive of excise, sales, use, property, occupational or like taxes which may be imposed by any taxing authority upon the manufacture, sale or delivery of the items sold hereunder. If any such taxes must be paid by Seller or if Seller is liable for the collection of such tax, the amount thereof shall be in addition to the amounts for the items sold. Buyer agrees to pay all such taxes or to reimburse Seller therefore upon receipt of its invoice. If Buyer claims exemption from any sales, use or other tax imposed by any taxing authority, Buyer shall save Seller harmless from and against any such tax, together with any interest or penalties thereon which may be assessed if the items are held to be taxable.

10. Indemnity For Infringement of Intellectual Property Rights: Seller shall have no liability for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights except as provided in this Part 10. Seller will defend and indemnify Buyer against allegations of infringement of U.S. Patents, U.S. Trademarks, copyrights, trade dress and trade secrets (hereinafter 'Intellectual Property Rights'). Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on an allegation that an item sold pursuant to this contract infringes the Intellectual Property Rights of a third party. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If an item sold hereunder is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at its sole expense and option, procure for Buyer the right to continue using said item, replace or modify said item so as to make it noninfringing, or offer to accept return of said item and return the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller shall have no liability for claims of infringement based on information provided by Buyer, or directed to items delivered hereunder for which the designs are specified in whole or part by Buyer, or infringements resulting from the modification, combination or use in a system of any item sold hereunder. The foregoing provisions of this Part 10 shall constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights.

If a claim is based on information provided by Buyer or if the design for an item delivered hereunder is specified in whole or in part by Buyer, Buyer shall defend and indemnify Seller for all costs, expenses or judgments resulting from any claim that such item infringes any patent, trademark, copyright, trade dress, trade secret or any similar right.

11. Force Majeure: Seller does not assume the risk of and shall not be liable for delay or failure to perform any of Seller's obligations by reason of circumstances beyond the reasonable control of Seller (hereinafter 'Events of Force Majeure'). Events of Force Majeure shall include without limitation, accidents, acts of God, strikes or labor disputes, acts, laws, rules or regulations of any government or government agency, fires, floods, delays or failures in delivery of carriers or suppliers, shortages of materials and any other cause beyond Seller's control.

12. Entire Agreement/Governing Law: The terms and conditions set forth herein, together with any amendments, modifications and any different terms or conditions expressly accepted by Seller in writing, shall constitute the entire Agreement concerning the items sold, and there are no oral or other representations or agreements which pertain thereto. This Agreement shall be governed in all respects by the law of the State of Ohio. No actions arising out of the sale of the items sold hereunder or this Agreement may be brought by either party more than two (2) years after the cause of action accrues.

Parker Hannifin Corporation

About Parker Hannifin Corporation

Parker Hannifin is a leading global motion-control company dedicated to delivering premier customer service. A Fortune 500 corporation listed on the New York Stock Exchange (PH), our components and systems comprise over 1,400 product lines that control motion in some 1,000 industrial and aerospace markets. Parker is the only manufacturer to offer its customers a choice of hydraulic, pneumatic, and electromechanical motion-control solutions. Our Company has the largest distribution network in its field, with over 7,500 distributors serving more than 350,000 customers worldwide.

Parker's Charter

To be a leading worldwide manufacturer of components and systems for the builders and users of durable goods. More specifically, we will design, market and manufacture products controlling motion, flow and pressure. We will achieve profitable growth through premier customer service.

Product Information

North American customers seeking product information, the location of a nearby distributor, or repair services will receive prompt attention by calling the Parker Product Information Center at our toll-free number: 1-800-C-PARKER (1-800-272-7537). In the UK, a similar service is available by calling 0500-103-203.

The Aerospace Group

is a leader in the development, design, manufacture and servicing of control systems and components for aerospace and related high-technology markets, while achieving growth through premier customer service.

The Climate & Industrial Controls Group

designs, manufactures and markets system-control and fluid-handling components and systems to refrigeration, air-conditioning and industrial customers worldwide.

The Fluid Connectors Group

designs, manufactures and markets rigid and flexible connectors, and associated products used in pneumatic and fluid systems.

The Seal Group designs, manufactures and distributes industrial and commercial sealing devices and related products by providing superior quality and total customer satisfaction.

The Hydraulics Group

designs, produces and markets a full spectrum of hydraulic components and systems to builders and users of industrial and mobile machinery and equipment.

The Filtration Group

designs, manufactures and markets quality filtration and clarification products, providing customers with the best value, quality, technical support, and global availability.

The Automation Group

is a leading supplier of pneumatic and electro-mechanical components and systems to automation customers worldwide.

The Instrumentation Group

is a global leader in the design, manufacture and distribution of high-quality critical flow components for worldwide process instrumentation, ultra-high-purity, medical and analytical applications.
